

COMPETITION RULES AND REGULATIONS AUTOMOTIVE HACKATHON 2026

I. GENERAL INFORMATION ABOUT THE COMPETITION

1. Competition Overview & Organizing Entity

- Competition name: Automotive Hackathon 2026, a competition sponsored and organized by FPT Software.
- Official competition website: fptautomotive-hackathon.com
- The Competition is sponsored and organized by FPT Software.

2. Competition Structure and Timeline

Timeline	Activity
12/06/2026	Competition launch, registration opening, and publication of the full starter pack
25/06/2026	Webinar on the rules and regulations + introduction to the 4 verticals
12/06 – 12/07/2026	Round 1: Team registration + proposal submission
18/07/2026	Announcement of the 20 teams advancing to Round 2
21/07/2026	Webinar on how to use FPT tools
21/07 – 10/08/2026	Round 2: Product development on the competition platform (with mentor support)
17/08/2026	Announcement of the 5 finalist teams
22/08/2026	Round 3: 24-hour on-site refinement with teammates and mentors in Hanoi
23/08/2026	Final Round in Hanoi: Pitching and Award Ceremony

II. PROVISIONS ON ELIGIBILITY, COMPETITION CONTENT, AND FORMAT

1. Eligibility

To participate in the Competition, Contestants must satisfy all of the following conditions:

1.1. Be a Vietnamese citizen aged 16 years or older (as verified by a national ID card, citizen identity card, or other lawful identification documents).

1.2. Hold a valid Zalo account.

1.3. Not be under investigation by law enforcement authorities, maintain good moral character and a healthy lifestyle, and be fully responsible for the accuracy of all declarations made in the dossier submitted to the Organizing Committee.

1.4. Ineligible participants include members of the Organizing Committee, individuals involved in the organization of the Competition, and individuals registering on behalf of an organization or enterprise.

2. Notes on Competition Registration

2.1. If participating as a team, the Team Leader must ensure that all team members have been fully informed of, and have agreed to participate in, the Competition in accordance with these Rules and Regulations.

2.2. If you intentionally provide false or misleading information regarding your identity, residence, address, telephone number, email address, ownership, or any other information relevant to the Competition, you may be immediately disqualified.

2.3. Throughout the registration and participation process, you must comply with all regulations and requirements issued by the Organizing Committee, including these Rules and Regulations and all content published on the official Competition website. In the event of any issue in confirming participation, the submission of an entry shall be deemed your full acceptance of all such regulations and requirements.

2.4. Under no circumstances may you submit an entry or become eligible to receive any prize (the "Prize") unless the Organizing Committee has received your agreement to these Rules and Regulations.

3. Notes on Account Registration and Submission of Entries

3.1. You may register for Automotive Hackathon 2026 as a team. However, each team may register only one (01) account.

3.2. Each team must consist of a minimum of two (02) and a maximum of five (05) members.

3.3. It is strictly prohibited for any individual to participate in multiple teams or to create multiple accounts and submit results through more than one account.

3.4. During the Competition period, the private sharing of a team's source code or data outside the team is not permitted.

3.5. Source code sharing shall only be permitted if such sharing is made publicly available to all Contestants on the official Competition forum.

3.6. Winning teams may not publicly disclose the Organizing Committee's platform and may only disclose the solution and exercise developed by the team during the Competition.

3.7. All entries shall be uploaded to the Virtual Development Platform provided by the Organizing Committee; detailed technical instructions shall be communicated to Contestants and teams prior to the commencement of the Competition.

3.8. The Organizing Committee encourages teams to use AI in the course of developing their solutions.

3.9. If the Organizing Committee discovers any plagiarism or copying of work or products from other parties on the Internet, the violating team shall be immediately disqualified.

3.10. Any solution that infringes the intellectual property rights of a third party shall not be accepted in the Competition.

4. Competition Format and Content

4.1. Competition format: Teams shall build their solutions on the Virtual Development Platform provided by FPT and comply with the platform's terms of use from the date on which the platform is made available to the Contestants. Teams are free to choose the programming language, framework, and technology stack appropriate to their selected challenge.

4.2. Competition accounts: Teams shall receive information regarding their competition accounts within three (03) days prior to the commencement of Round 2. The Organizing Committee shall send such account information to each team by email so that teams may log in, verify information, practice, and familiarize themselves with the system.

5. Competition Registration

5.1. Contestants must register by team, consisting of a minimum of two (02) and a maximum of five (05) members, via the online registration form on the website fptautomotive-hackathon.com from 12/06/2026 through the end of 12/07/2026.

5.2. Each team may select the challenge most suitable to its capabilities; teams are free to combine sub-challenges depending on the team's concept and solution approach.

5.3. Each Contestant may participate in one team only.

5.4. Any team requiring changes to member information must re-register on the Competition website before the registration deadline (23:59 on 12/07/2026). The Organizing Committee shall use the final submitted information; after this deadline, no changes to team member information shall be permitted.

5.5. Contestants and teams are responsible for declaring fully and accurately all information requested by the Organizing Committee during registration. In the event of inaccurate declarations or any detected fraud relating to the registration account, the Organizing Committee shall have the right to consider cancelling part or all of the Contestant's and team's results and disqualifying the Contestant or team from the Competition.

6. Competition Challenges

6.1. The Professional Council shall be responsible for preparing the Competition challenges.

6.2. The challenge authors shall consist of PhD and Master's degree holders, technology experts, and software developers with more than ten (10) years of software development experience and deep knowledge and expertise in algorithms.

6.3. Challenge drafting, review, and quality assessment process: the challenges are independently developed and refined by the challenge authors on the basis of fundamental problems or practical project-based use cases.

6.4. The challenge authors shall ensure confidentiality and shall not disclose the challenge content, in any form, to any unauthorized person.

6.5. The challenges shall not contain hostile, offensive, or defamatory wording or content directed at any individual or organization and must be consistent with social ethics, public decency, and applicable law.

6.6. The Organizing Committee shall provide a Virtual Development Platform for the Competition together with four (04) verticals. Each vertical includes supporting resources such as sample code, datasets, APIs, and instructional workshops. Teams are not required to build infrastructure from scratch and should focus on developing their products based on the components provided.

6.7. The four verticals are not designed as isolated tracks and may be flexibly combined on the same platform. Accordingly:

Solutions that leverage and combine multiple verticals shall be highly valued. Cross-vertical development is encouraged (but not mandatory) and is subject to separate bonus-scoring criteria.

The challenges are intended to provide development direction and do not constitute fixed-answer problems. Teams may adapt, extend, or innovate beyond the suggested scope. The Organizing Committee shall not deduct points for solutions developed differently from the suggested direction, provided that such solutions are reasonable and demonstrate clear value.

Teams may use AI; however, teams must clearly describe in the write-up how AI was used, the types of prompts used, the parts effectively supported by AI, and the parts not adequately addressed by AI. This is a factor viewed positively by the Judging Panel.

A team may achieve outstanding results through the effective use of AI. The Competition does not assess the level of manual effort; rather, it focuses on product quality and problem-solving capability.

Vertical	Challenge Direction and Starter Pack Resources
Agentic AI at the Edge	Use AI to support automotive software development, including technical document search, requirements traceability, impact analysis for code changes, and automated UI testing. Accompanying resources include a document pack, sample code repository, pull request diffs, and UI mockups.
Digital Cockpit	Develop applications for the Android Automotive cockpit display, including cluster, media, HVAC, OTA, voice assistant, and parking functions. Accompanying resources include emulator setup, VHAL scripts, sample code, and multi-display AVD configurations.
Connected Car Services	Develop driver monitoring and camera-based emergency braking solutions. Accompanying resources include a preconfigured simulation environment on the competition platform (video replay, telemetry, and scenarios), as well as a sample algorithm container with VS Code in the browser.
Vehicle Middleware	Develop vehicle diagnostic services in accordance with the SOVD standard, including DTC, OTA, ECU emulator, CAN gateway, and UDS capabilities. Accompanying resources include a hardware lab (Raspberry Pi + TC397) and a service template.

6.8. The full starter pack shall be made publicly available to all teams from the date of the Competition launch. Teams may fork, modify, or replace any component thereof. Rebuilding any component already available in the starter pack is not prohibited; however, no additional points shall be awarded for such work, and teams shall determine for themselves whether the time investment is appropriate.

6.9. Detailed information regarding the challenges under each track is provided in the Challenge Tracks section on the official website: fptautomotive-hackathon.com. Teams are required to review such information before commencing the development of their solutions.

7. Scoring Criteria and Ranking

Round 1: Proposal Screening

- Teams shall register on the official website at fptautomotive-hackathon.com. Upon completion of team registration, the Organizing Committee shall send a confirmation email together with a link for selecting the specific challenge and the template required for presenting the proposed solution.
- Result: The twenty (20) teams with the strongest proposals shall advance to Round 2.
- The judging panel for this round shall comprise the mentors serving as the primary persons in charge of each vertical.

Criteria	Score
Idea: Clear description of the proposed idea, the problem to be solved, its practical value, and its development potential.	35
Feasibility: The extent to which the proposed solution can be implemented in subsequent rounds. The product development outline must be logical and practical, with a clear description of the architecture or process flow.	30
Understanding of the challenge and the starter pack: The extent to which the team accurately understands the challenge and makes effective use of the resources provided by the Organizing Committee. The proposal should demonstrate a clear plan for leveraging the starter pack and maximizing the use of the platform.	20
Team capability: The team's ability to execute the proposed solution based on its current composition. The team's skill set must be aligned with the proposed direction, and the allocation of roles within the team must be appropriate and well-structured.	15

Round 2: Product Development on the Competition Virtual Development Platform

Mentorship:

- Each team shall be assigned a minimum of one (01) mentor, provided by FPT Automotive.
- Mentors shall conduct periodic check-ins, provide technical support, and suggest development directions.
- Mentors shall not participate in product development and shall not make decisions on behalf of any team.

End-of-Round Deliverables:

- The artifact, version, and configuration corresponding to the product the team intends to demonstrate.
- A source snapshot or commit reference submitted in accordance with the Organizing Committee's submission instructions.

- Documentation/README, write-up, presentation slides, and demo video in the format announced by the Organizing Committee.
- Claim–Evidence Map: core results, baseline, team-owned components, expected results, and evidence IDs.
- Product & Integration Card: offering, user, buyer/process owner, dependencies, and next validation step.

There is no limit on the number of functions, and no additional points shall be awarded based solely on the number of claims. Teams should prioritize the highest-value components that can be clearly demonstrated within the evaluation period.

Three integration states

- Integrated: the contract has been connected and there is evidence showing data passing through it.
- Simulated: the team uses an emulator, test double, or replay and clearly states the parts that have not yet been verified.
- Planned: the item exists only in the architecture or roadmap and shall not be treated as an implemented capability.

Synthetic data and replay may be used, provided that the team discloses the generation method, scope, and limitations, and ensures appropriate usage rights.

Result:

- The Top 5 teams shall advance to the Final Round and receive feedback from the Judging Panel by email.
- Teams ranked 6th to 20th shall receive feedback from the Judging Panel by email.
- The Round 2 Judging Panel shall comprise the mentors serving as the primary persons in charge of each vertical.

To achieve a high score, teams must demonstrate the following:

Note: No additional points shall be awarded based solely on the number of functions, screens, modules, or the inherent difficulty of the build.

Criteria	Reference Score	Teams must demonstrate
End-to-end demo and core functionality	25	An observable, correct, stable core flow with defined scenarios and transparent disclosure of any

		simulated components.
Technical quality and execution evidence	20	Alignment across architecture, contracts, tests, observability, failure handling, and submitted artifacts.
Added value and team-owned contribution	25	Clear identification of team-owned components and evidence-backed benefits compared with the baseline/starter pack.
Platform utilization / ecosystem alignment	15	For non-AI solutions, demonstrate the core flow on CarSky; for AI-for-engineering solutions, demonstrate real integration through interfaces or standard artifacts.
Understanding of users, customers, and deployment readiness	10	Clearly state what is being offered or provided, to whom, the relevant dependencies, and the next validation step.
Presentation and clarification responses	5	Connect claims to evidence, prioritize the core flow, and provide answers that remain consistent with the submitted artifact.

Understanding Evidence Levels:

Level	Interpretation	Evidence Indicators
L0	Absent or contradictory.	No suitable evidence has been provided.
L1	Partial, or primarily claim-based.	Insufficient to validate the core claim.
L2	The core claim is observable.	Identified gaps remain in scope, edge cases, or repeatability.
L3	Complete within the scope declared by the team.	Direct, consistent, repeatable evidence that satisfies the relevant anchor.

Starter pack & Platform:

Level	Reference Resources in the Competition Materials	Evidence Indicators
Agentic AI at the Edge	Document, code, PR, and UI samples; FastAPI template; and sample data/metrics.	KMS/RAG/agent logic, coverage, regression analysis, test generation, or UI intelligence.
Digital Cockpit	Emulator/AVD, sample code, default VHAL/VHAL scripts, media/audio samples, and DTC/UDS samples.	Use-case behavior, custom integration contract, assistant logic, diagnostic analysis, and end-to-end evidence.
Connected Car Services	Dataset, loader, video/telemetry replay, ground truth, TTC baseline, notebook, and sample container.	Model/pipeline improvement, fusion/scoring, dashboard/report, workflow outcome, and validation.
Vehicle Middleware	SOVD/ECU/CAN/UDS examples, service template, and sample application, if provided.	Gateway/adapter/system behavior, protocol correctness, failure handling, and verification trace.

The starter pack is not included in the Platform Utilization score. The starter pack provides sample content to help teams accelerate development; using or not using it shall not, by itself, result in additional points or point deductions. Connected Car Services does not include CarSky in its starter pack. For Digital Cockpit, Connected Car Services, and Vehicle Middleware, the alignment path is CarSky: to achieve L2 or above, teams must demonstrate that the core flow of their implementation runs on CarSky.

Agentic AI at the Edge does not yet have a dedicated platform runtime. Points shall be awarded based on demonstrated integration through implementation, not diagrams: (a) the capability can be invoked externally through an MCP tool, agent-to-agent integration, API, or CLI; or (b) the solution can receive/export industry-

standard artifacts such as SLX, XMI, ARXML, requirements/PRs, and produce outputs consumable by the next step in the engineering workflow.

- Re-running or repackaging an existing capability shall not, by itself, constitute high Added Value.
- Using compute or hosting only shall not, by itself, demonstrate deep Platform Utilization.
- A node/container shall not, by itself, demonstrate that the workload is ECU, vECU, or in-car.
- Digital Cockpit, Connected Car Services, and Vehicle Middleware must demonstrate that the core flow runs on CarSky to achieve Platform Utilization at L2 or above.
- Agentic AI is not required to use CarSky; teams must demonstrate integration through MCP/A2A/API/CLI or through industry-standard artifacts with an actual consumer.

Offering, users, and applicability

Teams should clearly state whether they are providing an app, service, module, SDK, engineering tool, or internal tool, and identify the applicable B2B, B2C, B2B2C, internal, or non-commercial relationship where relevant. Teams must distinguish users from buyers/process owners and clearly state whether each dependency is integrated, simulated, or planned.

TAM, pricing, LOI, or actual partner integration is not required unless it is part of the team's claim. The Judging Panel shall evaluate the content and evidence submitted by the team and shall not construct a commercial answer on the team's behalf.

Mentoring role

Mentors may challenge the team's scope, risks, verification approach, and interpretation of announced resources. Teams remain responsible for preparing their own data, source code, mocks/test doubles, integration, documentation, and demo.

Demo and Q&A

Teams should be prepared to operate their core flow independently and answer questions regarding team-owned components, dependencies, integration status, offering, and the next validation step. The schedule, duration, and format of the demo/Q&A session shall be announced separately by the Organizing Committee.

General notes

The anchors in these guidelines are examples intended to help teams prepare and to support the Judging Panel's reference; they are not a closed list of all possible

evidence types. The Organizing Committee and the Judging Panel may consider the submission as a whole, actual conditions, and any arising circumstances to ensure appropriate and overall fair evaluation.

Detailed scoring rubric for team self-review

The section below is intended to help teams review their submissions before final submission. The examples should not be interpreted as a legal checklist or as a commitment that every judging session will follow the same operating procedure.

End-to-end demo and core functionality – 25 points					
Category	Weight	L0 – Absent	L1 – Partial	L2 — Core achieved	L3 — Complete
Completeness of the core flow	8	No executable flow from input to output is provided.	Only isolated fragments run; a core step is skipped or manually replaced.	The core flow runs end-to-end, but one identified gap remains.	All core claims/results stated by the team run end-to-end, with no bypass of team-owned components.
Live online demo and stability	6	The demo cannot run live due to causes attributable to the team.	Completion requires multiple resets or out-of-flow intervention.	One complete run is demonstrated, with minor issues remaining or repeatability not yet proven.	The team operates the demo independently and stably, with repeated runs or evidence of repeatability.
Correctness of results	5	No expected result is stated, or correctness cannot be determined.	Results are assessed only through subjective observation.	An oracle, rule, ground truth, or metric is provided, but the scope remains narrow.	Results are checked against a versioned oracle/metric on representative data.
Representative scenarios and edge cases	4	Only toy data is used and it does not represent the use case.	A reasonable happy path is provided, but no edge/error case is included.	Representative scenarios and at least one edge/error case are provided.	The scenario set covers the main claim, edge cases, and the corresponding expected

					behavior.
Transparency of demo scope	2	No distinction is made among real, simulated, planned, provided, and team-owned components.	Disclosure is provided, but one important boundary is missing.	All states are declared before the demo and are aligned with the architecture.	Disclosure is complete and consistent with logs, artifacts, versions, and the evidence map.

Technical quality and execution evidence – 20 points					
Category	Weight	L0 – Absent	L1 – Partial	L2 — Core achieved	L3 — Complete
Architecture and technical choices	5	Cannot be explained or is inconsistent with the running product.	A diagram is provided, but it mainly lists technologies.	The architecture fits the declared scope, and the main boundaries can be explained.	Choices, trade-offs, limitations, and consistency with the runtime can be clearly explained.
Integration and communication contract	5	Components are not connected, or the core integration is manually substituted.	Partial connection is shown, but the API, signal, schema, or contract is unclear.	Happy-path integration works, and the main contract is defined.	The contract is clear, with data trace across boundaries and relevant error behavior.
Testing and verification approach	4	No test or verification method is provided beyond observing the demo.	Isolated tests are provided but are not directly linked to the claim.	Repeatable tests/metrics are provided for the main claim, but coverage remains limited.	The test set, oracle/metric, and results are versioned and reproducible.
Failure handling and observability	4	No error handling, logs, or diagnostic	Basic logging/error capture is	Main failures are handled, with logs/traces sufficient	Failure behavior, observability,

		state is provided.	present, but root cause identification is difficult.	to follow the core flow.	and evidence are provided for claim-relevant errors.
Identification of the assessed artifact	2	The version, configuration, or artifact cannot be identified.	A version is provided, but one important item of information is missing.	The version/configuration matches the submission and the demo environment.	The artifact, configuration, evidence, and backup video share the same submitted identity.

Added value and team-owned contribution – 25 points					
Category	Weight	L0 – Absent	L1 – Partial	L2 – Core achieved	L3 – Complete
Proper baseline establishment	3	No baseline is stated, or the selected starting point is not relevant.	A baseline is stated, but the nearest existing capability or asset is omitted.	The baseline is aligned with the Baseline Manifest and the declared reused assets.	The baseline/version is clear, and the comparison conditions or ablation setup are locked.
Separation of team-owned contribution	5	The team cannot distinguish team-developed work from provided or reused components.	Only modules or technologies are listed.	The boundaries among provided, configured, modified, and newly developed components are clear and appear in the core flow.	Functional, technical, and ownership boundaries are consistent with the artifact, demo, and evidence.
Decisiveness of the team-owned contribution	6	Removing the team-owned contribution would leave the core claim or outcome almost	The new work changes only the presentation layer or a peripheral claim.	The new work determines at least one core claim/result stated by the team, but the evidence	Counterfactual or ablation evidence shows that the main claim fails or materially degrades without the new work.

		unchanged.		remains narrow.	
Benefits compared with the baseline	7	The team only claims improvement without comparison.	Qualitative benefits or a single example are provided.	A reasonable metric, test, workflow outcome, or before/after comparison is provided.	Comparison is conducted under the same conditions, with representative data and stated trade-offs/limitations.
Meaningful differentiation for the use case	4	The work is primarily a reskin, packaging change, or redeployment of existing behavior.	A minor improvement addresses a secondary pain point.	The differentiation directly improves the main use case.	The differentiation is clear, necessary for the use case, and demonstrated end-to-end.

Platform Utilization / Ecosystem Alignment – 15 points					
Category	Weight	L0 – Absent	L1 – Partial	L2 – Core achieved	L3 – Complete
Track-specific ecosystem alignment path	5	Non-AI: no evidence that the solution runs on CarSky. AI-for-engineering: the demo is closed, with no callable integration boundary or exchangeable standard artifact.	Non-AI: the workload is deployed or started on CarSky, but the core flow does not yet run. AI: an API/CLI/schema or technical artifact input is present, but no external harness or step is proven to call or consume it.	Non-AI: the core flow runs on CarSky and produces observable output. AI: at least one integration path runs end-to-end — an external agent/harness invokes the capability through MCP, agent-to-agent integration, API/CLI, or the solution	The integration path is repeatable; the contract/schema/version and error behavior are clear; and the evidence matches the submitted implementation.

				receives/exports a standard artifact consumable by the next engineering step.	
Depth of integration into the core flow	4	Only hosting/UI is used, or the integration sits outside the part that produces the main result.	A peripheral connection exists, but the output is still mainly transferred manually or does not affect the core claim.	CarSky, or interface/artifact is directly participates in the team-owned core flow.	If the integration path is removed, the main workflow/claim fails or materially degrades; responsibility boundaries are demonstrated.
Platform-derived evidence	4	No evidence is provided beyond the presentation.	A screenshot/log or isolated I/O example is provided, but it does not prove the core path.	Non-AI: logs/traces/output from CarSky are provided. AI: invocation trace, contract, and artifact I/O prove that an external step can call or consume the capability.	Evidence is repeatable and clearly identified, includes relevant failure cases, and directly confirms the team-owned part.
Boundaries and proportionality	2	A node/container is equated with ECU, vECU, or in-car execution; or an interface/form is attached only to obtain points.	The deployment location or exchange format is known, but the system-under-test/consumer boundary remains unclear.	Correctly identifies where each part runs, who calls or consumes it, why the integration path is used, and its limitations.	Boundaries are consistent with the topology, contract, and artifacts; the selected approach is minimal and supported by clear trade-offs.

Understanding of users, customers, and deployment readiness – 10 points					
Category	Weight	L0 – Absent	L1 – Partial	L2 — Core achieved	L3 — Complete
Users and decision makers	2	The target audience is generic or not identified.	Users are identified, but the buyer/process owner or budget owner remains unclear.	Relevant roles are distinguished in a manner appropriate to the use case.	Roles, workflow, and decision points are consistent with the product.
Offering and adoption relationship	2	It is unclear what is actually being provided.	A product name is provided, but the delivery form or adoption relationship remains ambiguous.	Clearly states the app/service/module/SDK/tool and the B2B/B2C/B2B2C/internal relationship, where applicable.	Both dimensions are clear, non-contradictory, and linked to the buyer/process owner.
Outcome and applicability assumptions	2	The solution is not linked to a specific outcome.	The benefit is reasonable, but assumptions are not stated.	Explains why the target party would use, approve, or pay for the solution; assumptions are marked.	The outcome is supported at an MVP-appropriate level by workflow, metrics, data, or feedback.
Integration and external dependencies	2	Mandatory dependencies exist but are not stated, or they are described inconsistently.	Dependencies are listed or the team states that none exist, but status and	All dependencies are stated, or the absence of dependencies is confirmed; each is linked to a real, simulated, or planned status.	Responsibility boundaries and the impact of each dependency on the claim

			responsibility remain unclear.		are clearly explained.
Next validation step	2	Only generic expansion or commercialization is mentioned.	A next step is stated, but the key barrier is not identified.	A next validation step and the most important barrier are identified.	The next step is specific, feasible, and aligned with the assumptions that remain unvalidated.

Presentation and clarification responses – 5 points					
Category	Weight	L0 – Absent	L1 – Partial	L2 – Core achieved	L3 – Complete
Claim–Evidence Map	1	The claim, baseline, or team-owned component cannot be identified.	The map is present but verbose, or one boundary is missing.	Core claims are clear and include evidence IDs; no points are awarded based on quantity alone.	The claims, baseline, ownership, and evidence map are fully consistent.
Demo walkthrough	1	The team cannot explain what each action is intended to prove.	The demo can be followed, but the conclusion is disconnected from the evidence.	Each demo segment is linked to a claim.	Input, processing, output, and evidence are clearly guided, without creating a halo effect from slides.
Time management	1	The core portion is not reached in time, or the team significantly exceeds the time limit.	The team stays within time but spends too much time on secondary content.	The team stays within time and prioritizes the core flow.	Time is reasonably allocated across claims, demo, and limitations.

Transparency of limitations	1	Limitations, simulations, or errors are not disclosed, or are described inconsistently.	Limitations are mentioned, but their impact is not clear.	Real, simulated, planned components and limitations are clearly stated.	Limitations are clearly stated and directly linked to their impact on each claim.
Clarification responses	1	The team cannot answer, or the answer contradicts the submitted artifact.	The answer is generic and supported by limited evidence.	The answer is focused and consistent.	The answer is accurate, includes evidence IDs, and appropriately acknowledges what remains unknown.

This document is provided for guidance purposes only and does not constitute a service commitment or SLA by the Organizing Committee. The detailed schedule, evaluation session format, Judging Panel composition, actual resources, incident-handling process, and operational adjustments shall be implemented in accordance with the Organizing Committee’s official announcements. The Organizing Committee may make adjustments where necessary to ensure operational feasibility and overall fairness.

Round 3: 24-Hour Hackathon with Teammates

22/08/2026:

Teams shall gather in Hanoi and participate in a live 24-hour hackathon experience with their teammates and mentors for the purpose of refining their solutions and verifying the operation of their demo on the system. The Organizing Committee shall provide technical support only and shall not provide input on, or make adjustments to, any team’s pitch content or product demo.

23/08/2026 – Final Round:

- Each team shall have a total of thirty (30) minutes on stage, comprising:
- Twenty (20) minutes for the pitch and product demonstration
- Ten (10) minutes for questions and answers with the Judging Panel.

The Judging Panel shall comprise representatives of FPT, industry experts, and customer/partner representatives. Teams shall present the product completed in Round 2; no further development or coding shall be required during the Final Round.

The Organizing Committee shall apply the following support policy:

- Each team advancing to the Final Round shall receive travel support in the amount of VND 5,000,000, to be transferred directly to the Team Leader's bank account.
- The Organizing Committee shall cover all expenses for meals, accommodation, and transportation from the designated assembly point required by the Organizing Committee to the event venue throughout the Final Round period (two (02) days and one (01) night).

Core Criteria: 100 Points	Score
Documentation and Presentation Slides: (+01) The team presents the idea with all required elements, including: problem statement, solution, technologies used, input data, output data, implementation effectiveness, scope of deployment, and implementation timeline. (+01) The documentation demonstrates the research approach and contains specific conclusions and recommendations. (+01) The content is free from spelling errors. (+02) Source code and solution documentation are provided.	5
Presentation Skills: (+02) Confident and professional demeanor. (+02) Clear and coherent presentation with effective audience engagement. (+02) Appropriate use of spoken language, body language, and voice projection. (+02) Presentation delivered within the prescribed time limit. (+02) Effective interaction with the audience.	10
Responses to Questions from the Judging Panel: (+05) Answers are clear, logical, and demonstrate a strong understanding of the challenge. (+05) Accurate information is provided together with specific supporting evidence.	10

Creativity, Feasibility, and Effectiveness of the Solution: (+10) The solution demonstrates innovation and introduces a novel idea not previously applied. (+10) The solution is highly feasible and readily implementable. (+10) The solution demonstrates potential to improve performance, reduce costs, or increase revenue, including through process optimization. (+05) Diverse challenge integration: The team combines resources from two (02) or more domains into a product with clear and meaningful value.	35
Demo: (+15) The demo performs as described. (+10) The demo is presented by video or through a physical prototype/model. (+10) Maximum effective use of the platform and starter pack. (+05) Compelling AI story: The team uses AI creatively during development and clearly explains such use in the write-up.	40

III. COMPETITION ROUNDS

1. Registration and Proposal Screening Round

1.1. Registration period: From 12/06/2026 to 12/07/2026.

1.2. Screening format: Teams shall register directly on the official website at fptautomotive-hackathon.com. Upon successful registration, the Organizing Committee shall send a confirmation email together with a link for selecting the specific challenge and submitting the proposed solution concept.

1.3. There shall be no restriction on materials used during the online preliminary round. However, if the Organizing Committee detects any copying or sharing of submissions on the Internet, the violating team shall be immediately disqualified.

1.4. Based on the results of the proposal screening round, which are determined according to the team's submitted solution concept received before 11:59 PM (VNT) on 12 July 2026, The Organizing Committee shall retain the final decision in the event of any change arising from special circumstances.

2. Round 2: Product Development on the Competition Virtual Development Platform

2.1. Competition period: From 20/07/2026 to 10/08/2026.

2.2. Competition format: Teams shall directly develop and code their products on the Virtual Development Platform provided by FPT; teams are permitted to freely use external technologies in developing their solutions.

2.3. There shall be no restriction on materials used during this round. However, if the Organizing Committee detects any copying or sharing of submissions on the Internet, the violating team shall be immediately disqualified.

2.4. Based on the results of the Cloud-based idea implementation round, as determined by the team's submission made before 11:59 PM (VNT) on 10 August 2026, the five (05) highest-scoring teams shall advance to the Final Round. The Organizing Committee shall retain the final decision in the event of any change arising from special circumstances.

3. Round 3: 24-Hour Hackathon with Teammates

3.1. Competition period: From 22/08/2026 to 23/08/2026.

3.2. Competition format: On 22/08/2026, teams shall gather at the location designated by the Organizing Committee in Hanoi to meet mentors, collaborate with teammates, and finalize their products in person. On 23/08/2026, teams shall proceed to the pitching and product demonstration round before the Judging Panel.

4. Final Round Regulations:

4.1. Contestants belonging to teams advancing to the Final Round must submit supplementary documents, including: a copy of the student card (for Contestants who are currently students at universities or colleges), and a copy of the citizen identity card, as required by the Organizing Committee at least one (01) week prior to the official competition date.

4.2. For Contestants residing far from the event venue and Contestants under eighteen (18) years of age, confirmation from a family member and execution of a liability waiver shall be required in relation to travel and accommodation for participation in the competition in Hanoi.

4.3. Teams shall not be permitted to use mobile phones or any mobile devices capable of Internet connectivity during the competition.

4.4. Mobile phones or mobile devices must be placed in an envelope, sealed, and kept on the table in a powered-off state or in airplane mode.

4.5. Teams shall not use any materials in any form during the competition.

4.6. Teams shall not share, exchange, or copy each other's work in any form whatsoever.

4.7. Any fraudulent acts, including but not limited to copying another team's work or attacking the system, if detected and supported by sufficient evidence, shall result in the disqualification of the individual or team concerned, and such results shall not be recognized.

4.8. During the competition, if any question arises regarding the challenge or any technical issue, teams must immediately notify the supervisor or the Organizing Committee so that the most appropriate handling measures may be applied.

IV. PRIZES

1. Prize Structure – Main Awards

First Prize: VND 100,000,000 in cash

Second Prize: VND 80,000,000 in cash

Three Special Awards: VND 20,000,000 in cash each

Most Voted Award: VND 10,000,000 in cash

1.1. All prizes of the Competition, including main prizes and any subsidiary/additional prizes (if any) in any form whatsoever (cash, in-kind items, vouchers, or other benefits), may be subject to taxes, charges, and fees in accordance with applicable laws and regulations. Contestants/Teams shall be responsible for fully performing all tax and fee obligations relating to the receipt of prizes in accordance with law and the requirements of the competent state authorities, and for providing all necessary information/documents (such as identification documents, tax identification numbers, and relevant forms) for the Organizing Committee to complete the required procedures. Contestants/Teams hereby agree and irrevocably authorize the Organizing Committee to deduct from the prize value (or request additional payment if required by law) any taxes, charges, or fees that the Organizing Committee is responsible for withholding, declaring, or remitting, and to declare, withhold, and remit such amounts to the competent state authorities prior to prize presentation/payment. Accordingly, the net prize value actually received (if any) shall be the remaining amount after deduction of the amounts payable in accordance with applicable regulations.

1.2. All teams advancing to the Final Round shall be awarded medals and commemorative trophies by the Organizing Committee. Where a team member is serving an internship, FPT shall support confirmation and issuance of an internship certificate in accordance with the applicable regulations.

2. Prize Announcement and Award Presentation

2.1. Prizes shall be announced and presented on the Final Round date: 23/08/2026.

2.2. For cash prizes, the Organizing Committee shall disburse the prize money to the bank account of the Team Leader of the winning team within thirty (30) to fifty (50) working days from receipt of all necessary information as required by the Organizing Committee.

V. GENERAL RULES

1. Rights and Responsibilities of Contestants

1.1. Teams must strictly comply with these Rules and Regulations and all other Competition requirements.

1.2. Contestants are responsible for providing complete and timely information and relevant documents in accordance with the Competition rules and any other requirements of the Organizing Committee during the course of participation in the Competition.

1.3. Contestants shall be responsible for the accuracy, truthfulness, and legality of all information and documents provided to the Organizing Committee.

1.4. In all circumstances, if the Organizing Committee discovers that a Contestant or team has violated any of the above provisions, or if the Organizing Committee receives information regarding complaints or disputes relating to such matters, the Organizing Committee shall have the right to review, assess, and disqualify the Contestant or team, or revoke any prize already awarded, including after prize presentation.

1.5. Contestants or teams shall be obliged to return any prize already received, shall assume full responsibility, and shall be obligated to resolve any complaints or disputes with relevant parties.

1.6. If any act of fraud in the Competition is discovered, the Organizing Committee shall have the right to review, assess, and revoke the Contestant's eligibility to participate without prior notice immediately upon discovery.

2. Rights and Responsibilities of the Organizing Committee

2.1. The Organizing Committee and the sponsors shall have the right to use all images, audiovisual materials, and submission content for communication, promotion of the Competition, or brand promotion activities.

2.2. The Organizing Committee shall not be responsible for lost submissions, submissions containing infringing content, technical upload errors by Contestants, or submissions not submitted within the published deadline.

2.3. The Organizing Committee shall not be responsible for any information or materials prepared and provided by Contestants or teams.

2.4. The Organizing Committee shall be responsible for ensuring that the Competition is organized in compliance with the laws of Vietnam.

2.5. The Organizing Committee shall retain the highest and final authority with respect to Competition results and prizes. Only the Organizing Committee shall have the right to award prizes and revoke prizes.

2.6. The Organizing Committee shall have the right to remove and/or refuse to award prizes to any team that violates these Rules and Regulations or the published participation conditions, including but not limited to cases involving copyright disputes or complaints, indications of fraud, provision of false information, or any other unlawful conduct.

2.7. The Organizing Committee shall have the right to verify participant information and any other information relating to the Competition for compliance with these Rules and Regulations and the published participation conditions, including after prizes have been awarded. Contestants shall be obliged to cooperate and provide the necessary supporting information and documents upon request by the Organizing Committee.

2.8. The Organizing Committee shall be the sole party entitled to make all final decisions relating to any matters or events arising out of the Competition.

3. Prohibited Acts

Contestants are prohibited from using the products, competition platform, or any activities within the framework of Automotive Hackathon 2026 for any of the following purposes:

3.1. Opposing the State of the Socialist Republic of Vietnam; harming national security, social order, or public safety; undermining national unity; propagating wars of aggression or terrorism; or causing hatred or conflict among nations, ethnic groups, or religions.

3.2. Propagating, inciting, or promoting violence, obscenity, depravity, crime, social evils, superstition, or acts contrary to the fine traditions and customs of the nation.

3.3. Discussing or promoting political matters in any form whatsoever.

3.4. Disclosing state secrets, military secrets, security information, economic information, foreign affairs information, or any other confidential information protected by law.

3.5. Disseminating distorted or defamatory information, or infringing upon the reputation of organizations or the honor and dignity of individuals.

3.6. Advertising, promoting, or trading in prohibited goods or services; or distributing prohibited press products, literary works, artistic works, or publications.

- 3.7. Unlawfully obstructing, disrupting, or damaging national domain name server systems, systems or equipment providing Internet services and online information; or obstructing organizations or individuals from accessing information or lawfully using Internet services.
- 3.8. Unauthorized use of passwords, encryption keys, private information, personal information, or Internet resources of organizations or individuals.
- 3.9. Impersonating organizations or individuals, or disseminating false or misleading information online that infringes the lawful rights and interests of organizations or individuals.
- 3.10. Creating unauthorized links to the domain names of organizations or individuals.
- 3.11. Creating, installing, or distributing malicious software or computer viruses; unlawfully infiltrating or taking control of information systems; or creating tools for cyberattacks on the Internet.
- 3.12. Using any software, tool, or other means whatsoever to interfere with any product or system of Automotive Hackathon 2026.
- 3.13. Disseminating, promoting, or encouraging any activity intended to interfere with, damage, or gain unauthorized access to data of the provided product or the server system.
- 3.14. Gaining unauthorized access, attempting unauthorized access, or causing damage to the server system.
- 3.15. Any act or conduct that harms the reputation of Automotive Hackathon 2026 products or FPT Software in any form or by any means whatsoever.
- 3.16. Organizing any form of betting, gambling, or agreements relating to money, cash, or property.
- 3.17. Refusing to cooperate with any investigation, or failing to provide information as requested by the Organizing Committee or competent state authorities.
- 3.18. Any other act prohibited under the applicable laws of Vietnam.

4. Intellectual Property

“Intellectual Property” or “Intellectual Property Rights” shall mean all lawful rights and interests arising from or relating to intellectual property objects as provided by law, including but not limited to: (i) copyright and related rights in and to all products created or submitted by Contestants/Teams within the framework of the Competition (such as software/computer programs, source code and object code, technical design documents, databases, user interfaces, presentation content, images, audio, and demo videos); (ii) industrial property rights (if any), such as inventions, utility solutions, industrial designs, layout designs of semiconductor integrated circuits, trademarks, trade names, and geographical indications; (iii) rights in trade secrets, technological secrets, algorithms, data models, and processes; and (iv) all registration rights, filing rights, rights to seek

protection, rights of exploitation, assignment, transfer, and/or licensing, together with all rights and interests arising in the future, directly or indirectly relating to the Competition Work, submission, presentation, and all results generated through participation in the Competition.

4.1. Contestants represent and warrant that their submissions are their original work and do not infringe the copyright or other intellectual property rights of any third party.

4.2. All products, source code, ideas, models, results, or data created by Contestants/Teams during participation (the “Competition Work”) shall remain the property of the author. By submitting the Competition Work, the Team/Contestant grants to the Organizing Committee a non-exclusive, royalty-free, irrevocable, worldwide license for the duration of the Competition and post-Competition period, authorizing FPT and entities designated by FPT to exercise the following rights: (a) receive, store, reproduce, test-run, evaluate, perform security testing on, display, and present the Competition Work for the purposes of administration and judging; (b) use part or all of the Competition Work (including images, videos, descriptions, screenshots, and documents) for purposes of communication and promotion of the Competition; and (c) make reasonable edits in form only (including formatting, video trimming/editing, and presentation standardization) for communication purposes.

4.3. Unless expressly approved in writing by the Organizing Committee, Contestants shall not use the logos, slogans, trademarks, or other intellectual property assets of FPT, shall not act on behalf of FPT, and shall not combine or use the FPT brand or logo to communicate, distribute, transfer, or exploit the Competition Work in any form whatsoever.

5. Image Release

Contestants agree to permit FPT and its affiliated companies to use their names and images for communication and promotional purposes.

6. Indemnification and Limitation of Liability

Contestants agree to indemnify and hold FPT harmless from and against any claims, losses, damages, or costs arising out of:

- Any submission that infringes the copyright, trademark, patent, and/or confidentiality obligations of a third party;
- The provision of false or misleading information;
- Failure to comply with these Rules and Regulations, the Competition terms and conditions, or applicable law;
- Any third-party claim unrelated to the Competition;
- Any act, purpose, or issue arising from the use or misuse of any prize after receipt thereof.

The Organizing Committee shall not be liable in cases relating to:

- Technical errors, website errors, or system failures;
- Errors arising during data collection or processing; or
- Printing, display, or prize announcement errors.

7. Complaint Resolution

7.1. Any complaint relating to the results or the organization of the Competition shall only be accepted within seven (07) working days from the date of the official announcement of results.

7.2. The Organizing Committee shall have the right to refuse to process any complaint submitted after the above deadline or unsupported by valid evidence.

7.3. In all cases, the final decision relating to the implementation and organization of the Competition, the evaluation of submissions, and the award of prizes shall rest solely with the Organizing Committee.

7.4. Any conflict or dispute among Contestants, or between any Contestant and any other person, shall fall outside the responsibility of the Organizing Committee.

8. Force Majeure

In the event of force majeure, including but not limited to technical failures of the application platform, server failures, transmission failures, war, natural disasters, epidemics, changes in state policy, or other similar events, the Organizing Committee shall have the right to adjust the schedule, amend these Rules and Regulations, or cancel the Competition if necessary.

9. Implementation Provisions

9.1. These Competition Rules and Regulations shall take effect from the time they are published on the official website.

9.2. In all cases, the Organizing Committee shall have the right to supplement or amend part or all of these Competition Rules and Regulations, including the challenge content, competition format, event schedule, and prize structure where necessary, in order to ensure suitability with actual conditions.

9.3. Any such changes (if any) shall be publicly announced on the official channels of the Competition and shall take effect from the time of publication.

9.4. If any provision of these Competition Rules and Regulations is held invalid under the laws of Vietnam, the remaining provisions shall remain in full force and effect.

10. Contact Information

Official information regarding the Automotive Hackathon 2026 program shall be published on:

- Website: fptautomotive-hackathon.com
- Fanpage: FPT Automotive Career
- Email: FA.Hackathon@fpt.com

and through mass media channels confirmed to be official communication channels of the program's media partners.
